

The Submarine Emitter

Heraeus offers its twin tube infrared emitter with a special watercooling. The twin tube is surrounded by a round tube, working like a cooling pipe. So even at power densities of more than 800 kW/m^2 the outer tube stays cool.

Technical Data

- Short Wave
- Twin tube, 34 x 14 mm
cooling pipe, 40 mm \varnothing
- Gold reflector possible
- Power up to 400 Watt/cm
- Conventional mains voltages

Applications

- Drying of coatings in a vacuum chamber
